clusterSim

*Semantic Similarity Between Two Gene Clusters*

---

## Description

Given two gene clusters, this function calculates semantic similarity between them.

## Usage

```
clusterSim(cluster1, cluster2, ont = "MF", organism="human", measure="Wang", dr
```

## Arguments

cluster1	A set of gene IDs.
cluster2	Another set of gene IDs.
ont	One of "MF", "BP", and "CC" subontologies.
measure	One of "Resnik", "Lin", "Rel", "Jiang" and "Wang" methods.
organism	One of "human", "rat", "mouse", "fly" and "yeast".
drop	A set of evidence codes based on which certain annotations are dropped. Use NULL to keep all GO annotations.

## Value

sim	Semantic Similarity.
-----	----------------------

## Examples

```
cluster1 <- c("snR67", "snR40", "snR48", "snR17a", "snR8")
cluster2 <- c("YOR251C", "YPR137C-B", "YPR010C", "YPR072W")
clusterSim(cluster1, cluster2, ont="MF", organism="yeast", measure="Wang")
```

*geneSim*

*Semantic Similarity Between two Genes*

## Description

Given two genes, this function will calculate the semantic similarity between them, and return their semantic similarity and the corresponding GO terms

## Usage

```
geneSim(gene1, gene2, ont = "MF", organism="human", measure="Wang", drop= "IEA")
```

## Arguments

gene1	Entrez gene id.
gene2	Another entrez gene id.
ont	One of "MF", "BP", and "CC" subontologies.
organism	One of "human", "rat", "mouse", "fly" and "yeast".
measure	One of "Resnik", "Lin", "Rel", "Jiang" and "Wang" methods.
drop	A set of evidence codes based on which certain annotations are dropped. Use NULL to keep all GO annotations.

## Value

geneSim	Semantic similarity.
GO1	Corresponding GO terms for gene1.
GO2	Corresponding GO terms for gene2.

---

GOSemSim-package    *Gene Ontology-based Semantic Similarity Measures*

---

## Description

Implementation of semantic similarity measures to estimate the functional similarities among Gene Ontology terms and gene products

## Details

Quantitative measure of functional similarities among gene products is important for post-genomics study. and widely used in gene function prediction, cluster analysis and pathway modeling. This package is designed to estimate the GO terms' and genes' semantic similarities. Implemented five methods proposed by Resnik, Schlicker, Jiang, Lin and Wang respectively. Support five species: human, rat, mouse, fly, and yeast.

Package:	GOSemSim
Type:	Package
Version:	1.4.0
Date:	10-28-2009
biocViews:	GO, Clustering
Depends:	GO.db
Suggests:	Clustering, org.Hs.eg.db
License:	GPL Version 2

goSim

*Semantic Similarity Between Two GO Terms*

---

## Description

Given two GO IDs, this function calculates their semantic similarity.

## Usage

```
goSim(GOID1, GOID2, ont = "MF", organism="human", measure="Wang")
```

## Arguments

GOID1	GO ID 1.
GOID2	GO ID 2.
ont	One of "MF", "BP", and "CC" subontologies.
organism	One of "human", "rat", "mouse", "fly" and "yeast".
measure	One of "Resnik", "Lin", "Rel", "Jiang" and "Wang" methods.

## Value

goSim	Semantic similarity.
-------	----------------------

## References

```

IC

*Information content of GO terms*

## Description

These datasets are the information contents of GOterms.

[mclusterSim](#)

*Pairwise Semantic Similarities for a List of Gene Clusters*

## Description

Given a list of gene clusters, this function calculates pairwise semantic similarities.

## Usage

```
mclusterSim(clusters, ont = "MF", organism="human", measure="Wang", drop= "IEA")
```

**Arguments**

clusters	A list of gene clusters.
ont	One of "MF", "BP", and "CC" subontologies.
measure	One of "Resnik", "Lin", "Rel", "Jiang" and "Wang" methods.
organism	One of "human", "rat", "mouse", "fly" and "yeast".
drop	A set of evidence codes based on which certain annotations are dropped. Use NULL to keep all GO annotations.

**Value**

simmat	A Matrix of Pairwise Semantic Similarities
--------	--

**References**

Wang et al.(2007) A new method to measure the semantic similarity of go terms *Bioinformatics* (Oxford, England), 23:0 1274–81, May 2007. ISSN 1460-2059 <http://www.ncbi.nlm.nih.gov/pubmed/17344234> PMID: 17344234

cluster3 <- c("YNL133C", "YOL041C", "YOL018C", "YOR236W", "YOR179C", "YOR230W")
clusters <- list(a=cluster1, b=cluster2, c=cluster3)
mclusterSim(clusters, ont="MF", organism="yeast", measure="Wang")
```

mgeneSim

*Pairwise Semantic Similarity for a List of Genes***Description**

Given a list of genes, this function calculates pairwise semantic similarities.

**Usage**

```
mgeneSim(genes, ont = "MF", organism="human", measure="Wang", drop= "IEA")
```

**Arguments**

genes	A list of entrez gene IDs.
ont	One of "MF", "BP", and "CC" subontologies.
measure	One of "Resnik", "Lin", "Rel", "Jiang" and "Wang" methods.
organism	One of "human", "rat", "mouse", "fly" and "yeast".
drop	A set of evidence codes based on which certain annotations are dropped. Use NULL to keep all GO annotations.

**Value**

`simMatrix` A Matrix of Pairwise Semantic Similarities

`mgoSim`

*Semantic Similarity Between two GO terms lists*

**Description**

Given two GO term sets, this function will calculate the semantic similarity between them, and return their semantic similarity

**Usage**

```
mgoSim(GO1, GO2, ont="MF", organism="human", measure="Wang")
```

**Arguments**

<code>GO1</code>	A set of go terms.
<code>GO2</code>	Another set of go terms.
<code>ont</code>	One of "MF", "BP", and "CC" subontologies.
<code>organism</code>	One of "human", "rat", "mouse", "fly" and "yeast".
<code>measure</code>	One of "Resnik", "Lin", "Rel", "Jiang" and "Wang" methods.

**Value**

`mgoSim` Semantic similarity.
