Package 'alabaster.ranges'

October 16, 2025
Title Load and Save Ranges-related Artifacts from File
Version 1.9.1
Date 2025-07-22
License MIT + file LICENSE
Description Save GenomicRanges, IRanges and related data structures into file artifacts, and load them back into memory. This is a more portable alternative to serialization of such objects into RDS files. Each artifact is associated with metadata for further interpretation; downstream applications can enrich this metadata with context-specific properties.
Depends GenomicRanges, alabaster.base
Imports methods, S4Vectors, BiocGenerics, IRanges, Seqinfo, rhdf5
Suggests testthat, knitr, BiocStyle, jsonlite
VignetteBuilder knitr
RoxygenNote 7.2.3
biocViews DataImport, DataRepresentation

2 readAtomicVectorList

Index 11

readAtomicVectorList Load an atomic vector list

Description

Load a list of atomic vectors as a CompressedAtomicList from its on-disk representation. This is usually not directly called by users, but is instead called by dispatch in readObject.

Usage

```
readAtomicVectorList(path, metadata, ...)
```

Arguments

path String containing a path to a directory, itself created with the saveObject method

for CompressedAtomicLists.

metadata Named list of metadata for this object, see readObjectFile for details.

... Further arguments, to be passed to internal altReadObject calls.

Value

A CompressedAtomicList of the relevant type.

Author(s)

Aaron Lun

See Also

"saveObject, CompressedAtomicList-method", to save an object to disk.

```
library(S4Vectors)
X <- splitAsList(LETTERS, sample(3, 26, replace=TRUE))
tmp <- tempfile()
saveObject(X, tmp)
readObject(tmp)</pre>
```

readDataFrameList 3

Description

Load a list of data frames as a CompressedSplitDataFrameList from its on-disk representation. This is usually not directly called by users, but is instead called by dispatch in readObject.

Usage

```
readDataFrameList(path, metadata, ...)
```

Arguments

path	String containing a path to a directory, itself created with the saveObject method for CompressedSplitDataFrameList objects.
metadata	Named list of metadata for this object, see readObjectFile for details.
	Further arguments, to be passed to internal altReadObject calls.

Value

 $A\ Compressed Split Data Frame List.$

Author(s)

Aaron Lun

See Also

"saveObject,CompressedSplitDataFrameList-method", to save an object to disk.

```
library(S4Vectors)
Y <- splitAsList(DataFrame(Xxx=LETTERS, Yyy=1:26), sample(3, 26, replace=TRUE))
tmp <- tempfile()
saveObject(Y, tmp)
readObject(tmp)</pre>
```

4 readGRanges

1	D 1 CD C 11 1
readGRanges	Read a GRanges from disk

Description

Read a GRanges object from its on-disk representation. This is usually not directly called by users, but is instead called by dispatch in readObject.

Usage

```
readGRanges(path, metadata, ...)
```

Arguments

path	String containing a path to a directory, itself created with the stageObject method for GRanges.
metadata	Named list of metadata for this object, see readObjectFile for details.
	Further arguments to pass to internal altReadObject calls.

Value

A GRanges object.

Author(s)

Aaron Lun

See Also

"saveObject, GRanges-method", to save a GRanges to disk.

```
gr \leftarrow GRanges(c("chrA", "chrB"), IRanges(c(1, 5), c(100, 200)))
seqlengths(gr) \leftarrow c(chrA=1000, chrB=2000)
tmp <- tempfile()</pre>
saveObject(gr, tmp)
readObject(tmp)
```

readGRangesList 5

readGRangesList Read a GRangesList from disk
--

Description

Read a GRangesList object from its on-disk representation.

Usage

```
\verb|readGRangesList(path, metadata, ...)|\\
```

Arguments

path String containing a path to a directory, itself created with the saveObject method

for GRangesLists.

metadata Named list of metadata for this object, see readObjectFile for details.

... Further arguments, to be passed to internal altReadObject calls.

Value

A GRangesList object.

Examples

```
gr <- GRanges(c("chrA", "chrB"), IRanges(c(1, 5), c(100, 200)))
seqlengths(gr) <- c(chrA=1000, chrB=2000)
grl <- split(gr, rep(1:3, length.out=length(gr)))

tmp <- tempfile()
saveObject(grl, tmp)
readObject(tmp)</pre>
```

readSeginfo

Read a Seqinfo from disk

Description

Read a Seqinfo object from its on-disk representation. This is usually not directly called by users, but is instead called by dispatch in readObject.

Usage

```
readSeqinfo(path, metadata, ...)
```

Arguments

path String containing a path to a directory, itself created with the saveObject method

for Seqinfo objects.

metadata Named list of metadata for this object, see readObjectFile for details.

... Further arguments, ignored.

Value

A Seqinfo object.

See Also

"saveObject, Seqinfo-method" for the corresponding saving method.

Examples

```
si <- Seqinfo(c("chrA", "chrB"), c(1000, 2000))

tmp <- tempfile()
saveObject(si, tmp)
readObject(tmp)</pre>
```

 ${\tt save Object, Compressed Atomic List-method}$

Save compressed list of atomic vectors to disk

Description

Save a CompressedAtomicList object to its on-disk representation.

Usage

```
## S4 method for signature 'CompressedAtomicList'
saveObject(x, path, ...)
```

Arguments

x A CompressedAtomicList object.

path String containing the path to a directory in which to save x.

... Further arguments to pass to specific methods.

Value

x is saved to path, and NULL is invisibly returned.

Author(s)

Aaron Lun

See Also

 ${\tt readAtomicVectorList}, to \ {\tt read}\ a\ CompressedAtomicList\ from\ disk.$

Examples

```
library(S4Vectors)
X <- splitAsList(LETTERS, sample(3, 26, replace=TRUE))

tmp <- tempfile()
saveObject(X, tmp)
list.files(tmp, recursive=TRUE)</pre>
```

Description

Save a CompressedSplitDataFrameList object to its on-disk representation.

Usage

```
## S4 method for signature 'CompressedSplitDataFrameList'
saveObject(x, path, ...)
```

Arguments

```
    x A CompressedSplitDataFrameList object.
    path String containing the path to a directory in which to save x.
    ... Further arguments to pass to specific methods.
```

Value

x is saved to path, and NULL is invisibly returned.

Author(s)

Aaron Lun

See Also

readDataFrameList, to read a CompressedSplitDataFrameList from disk.

```
library(S4Vectors)
Y <- splitAsList(DataFrame(Xxx=LETTERS, Yyy=1:26), sample(3, 26, replace=TRUE))
tmp <- tempfile()
saveObject(Y, tmp)
list.files(tmp, recursive=TRUE)</pre>
```

```
save {\tt Object}, {\tt GRanges-method} \\ Save~a~GRanges~object~to~disk
```

Description

Save a GRanges object to its on-disk representation .

Usage

```
## S4 method for signature 'GRanges'
saveObject(x, path, ...)
```

Arguments

x A GRanges object or one of its subclasses.
 path String containing the path to a directory in which to save x.
 ... Further arguments to pass to specific methods.

Value

x is saved to path, and NULL is invisibly returned.

Author(s)

Aaron Lun

readGRangesList, to read a GRangesList from disk.

```
gr <- GRanges("chrA", IRanges(1:100, width=1))
grl <- split(gr, rep(1:3, length.out=length(gr)))

tmp <- tempfile()
saveObject(grl, tmp)
list.files(tmp, recursive=TRUE)</pre>
```

```
saveObject,Seqinfo-method
```

Save a Seqinfo object to disk

Description

Save a Seqinfo object to its on-disk representation.

Usage

```
## S4 method for signature 'Seqinfo'
saveObject(x, path, ...)
```

Arguments

```
x A Seqinfo object.
```

path String containing the path to a directory in which to save x.

... Further arguments to pass to specific methods.

Value

x is saved to path, and NULL is invisibly returned.
